Hurricane Energy plc

(“Hurricane” or the “Company”)

‘Lincoln Crestal’ 205/26b-14 Well Update

Hurricane Energy plc, the UK based oil and gas company focused on hydrocarbon resources in naturally fractured basement reservoirs, provides an update in relation to the 205/26b-14 well (“Lincoln Crestal”).

The Company notes speculation regarding the flare on the Transocean Leader drilling rig. The Company confirms that a drill stem test on the Lincoln Crestal well has produced oil to surface, resulting in a flare. At 13:10 on Sunday 8 September 2019, the well was shut-in to enable a planned pressure build-up test.

The Company will update the market on initial results of the well, including flow rates and oil type, following completion of the ongoing testing phase.

About Hurricane

Hurricane was established to discover, appraise and develop hydrocarbon resources associated with naturally fractured basement reservoirs. The Company's acreage is concentrated on the Rona Ridge, in the West of Shetland region of the UK Continental Shelf.

The Lancaster field (100%) is the UK’s first producing basement field. Hurricane is pursuing a phased development of Lancaster, starting with an Early Production System consisting of two wells tied-back to the Aoka Mizu FPSO. This development is initially expected to produce an average of 17,000 bopd (gross production of 20,000 bopd with assumed operating efficiency of 85%, following a period of ramp-up). First oil was achieved on 4 June 2019.

Hurricane’s other assets include Lincoln (50%), Warwick (50%), Halifax (100%), Whirlwind (100%), and Strathmore (100%). Together with Lancaster, these assets have total combined 2P reserves and 2C contingent resources of 2.6 billion barrels of oil equivalent (2.3 billion barrels of oil equivalent net to Hurricane).

In September 2018, Spirit Energy farmed-in to 50% of the Lincoln and Warwick assets, committing to a five-phase work programme targeting sanction of full field development in 2021. The first phase of the programme includes the drilling and testing of three wells in 2019, which is being carried out using the Transocean Leader semi-submersible drilling rig. Lincoln Crestal is the second well and was spudded on 12 July 2019.
